

Interview Assignment Front-end Internship

The assignment consists of two tasks, a small one and a bigger one.

1. In the programming language you feel most comfortable, write a program that prints the numbers from 1 to 100. But for multiples of three print "Ice" instead of the number and for multiples of five print "Cream". For numbers that are multiples of both three and five print "IceCream". This exercise should not take you more than 10 minutes.
2. In [this zip](#), you may find the skeleton for a Rick & Morty dashboard. All the instructions are in the Readme. We estimate it will take you somewhere between 5 and 7 hours depending on your experience. Feel free to take more time if you want to. The primary goal of this exercise is to assess your ability to write well-defined HTML, CSS, and JavaScript using modern patterns and technologies. There are no hard rules or tricky questions.

In case something is not clear, feel free to send us an email and we will get back to you. Please send us your work back via email **before Monday, April 12th, at 1:30 pm CET**.

Have fun!
